1. **(Currently Amended)** A method for maximizing the distribution of market information in an electronic trading environment, the method comprising:

*determining a bandwidth limit for a communication link that is used in distributing market information related to a tradeable object from an electronic market via a computing device;*

*selecting a first mode of transmission from a plurality of modes of transmission for distributing the market information via the computing device, wherein the first mode of transmission comprises sending a new market update message from the electronic market when a change in a market order book is detected;*

*determining that the bandwidth limit for the communication link is reached via the computing device; and*

*dynamically selecting a second mode of transmission for distributing the market information from a the plurality of modes of transmission via the computing device, wherein the second mode of transmission comprises sending a new market information snapshot at predetermined time intervals, wherein the market information snapshot comprises a best bid price and a best ask price currently available for the tradeable object.*

2. **(Canceled).**

3.     *(Previously Presented) The method of claim 1, further comprising:  
determining that a bandwidth over the communication link is below the bandwidth limit; and  
dynamically selecting the first mode of transmission.*
4.     *(Previously Presented) The method of claim 1 wherein the communication link comprises a network connection from a market information source to a gateway.*
5.     *(Original) The method of claim 1 wherein the communication link comprises a network connection from an electronic market information source to a client device.*
6.     *(Original) The method of claim 1 wherein the communication link comprises a network connection from a gateway to a client device.*
7.     *(Previously Presented) The method of claim 1 wherein determining a bandwidth limit for a communication link comprises manually setting a bandwidth limit.*
8.     *(Previously Presented) The method of claim 1 wherein determining a bandwidth limit for a communication link comprises measuring the bandwidth limit electronically by software.*
9.     *(Previously Presented) The method of claim 1 wherein the mode of transmission is dynamically changed from the first mode to the second mode when the second mode maximizes the distribution of the market information more than the first mode.*

10. *(Previously Presented) The method of claim 9 wherein the mode of transmission is dynamically changed from the second mode back to the first mode when the first mode maximizes the distribution of the market information more than the second mode.*

11. *(Previously Presented) The method of claim 1 wherein aspects of the plurality of modes of transmission may be dynamically adjusted to comport with changing bandwidth limits.*

12-25. *(Canceled)*
